### Unicoating UC2K Protective Coating

A two-component clear coating based on chemical nanotechnology. UniCoat 2K and UC2K Lacquer offers exceptional gloss retention and weather resistance for many years. The sealed surface is able to be cleaned easily, without using any special cleanser, and is more resistant to new soiling by virtue of its "easy-to-clean" effect. Dull and tired paintwork, chalky glass-fibre (GFK) surfaces and cloudy and tired anodised aluminium gleams again "just like new" and in original colours after treatment. Galvanised surfaces such as aluminium, brass, copper, and chrome are protected long-term against corrosion.

Due to the extremely thin "minimum-coating" thickness, a coating capacity of about 30 - 60 sq. metres non absorbing surfaces can be achieved per 1kg

## CONTRACTORS

### Unicoating UC2K Protective Coating

- Excellent gloss and long-life properties
- Long lasting "easy-to-clean" final coating
- Protection against UV rays which prevents bleaching of surfaces.
- "Anti-Graffiti" and "Anti-fingerprinting" capacity
- Long lasting protection against corrosion.
- Extremely resistance to mechanical influences
- Stability against condensation and climatic/temperature variations
- Resistance against acid and solvent invasions
- No special preparation of the base material is required

Currently these products are in use as protection on locomotives and freight wagons, ships, parking meters, facades, private planes, public art objects world wide.
